Technical Review - .NET Developer

Version 1.0
—

The goal of this test is to review your skills as a .Net Developer with a challenge that reflects the kind of work that you would do in Patagonian. Along with this document, you should also receive a compressed file including material and specification that you will need in order to solve the challenge.

Instructions

1. Create Web and Service projects following the provided document.
2. Complete the VS solutions to show a maximum of 15 songs as result of a category search. Use Spotify's public Web API https://developer.spotify.com/documentation/web-api/
3. Implement a simple WCF service to drive the API communication in the Services Project
4. Implement a controller that uses the service (in 2.) in the Web Project.
5. Implement a simple html page that provides a text input for a category, a search button and a list of song names as result.

Considerations

- - You have 7 days to complete this test, starting from the date you receive this
- document on your email inbox.
- - The result must be shown running the web project in solution in a local environment.
